

Project Sprint #1

The Solitaire game is described in CS449HomeworkOverview. You should read the description very carefully.

In this assignment, you aim to specify the requirements (i.e., user stories and acceptance criteria) of the target software that allows a human player to play a Solitaire game. These requirements will be fully implemented by the end of sprint 3. The minimum features include **choosing the board size and type, starting a new game, making a move, determining if a game is over**. The following is a sample GUI layout.

7

Board Type

English

Hexagon

Diamond

Board size

Figure 1. Sample GUI layout of the first working program by the end of Sprint 3

Use the following tables to document your user stories and acceptance criteria.

You are required to use the free ChatGPT or another LLM to complete two user stories and two of their respective acceptance criteria. You must ensure that the generated user stories are correct and fix them if not. At the end of the submission, provide screenshots of your LLM prompts and answers, along with the description of errors the LLM made that you had to correct. Points will be deducted if no screenshots/description are provided.

For the other user stories and acceptance criteria, you are not required to use LLM.

I. User Stories (3 points)

– **User Story Template:** As a <role>, I want <goal> [so that <benefit>]

ID	User Story Name	User Story Description	Priority	Estimated effort (hours)
1	Choose a board size	As a player, I want to choose a board size so that I can play Solitaire on a board that fits my preference.	1	2
2	Choose the board type	As a player, I want to choose a board type so that I can play the version of Solitaire I prefer.	2	2
3	Start a new game of the chosen board size and type	As a player, I want to start a new game of my chosen board size and type so that I can play a new game of Solitaire.	3	1
4	Make a move in a game	As a player, I want to make a move in a game so that I can play Solitaire.	4	3
5	A game is over	As a player, I want the game to determine when it is over so that I know when I have completed or lost the game.	5	1

II. Acceptance Criteria (AC) (12 points): Add/delete rows as needed.

User Story ID and Name	AC ID	Description of Acceptance Criterion	Status (completed, toDo, inProgress)
1. Choose a board size	1.1	AC 1.1 — View available board sizes Given the player is on the game setup screen When the player views the board size selection Then the available board sizes are displayed	toDo
	1.2	AC 1.2 — Select a board size Given the available board sizes are displayed When the player selects a board size Then the selected board size is indicated as selected	toDo
	1.3	AC 1.3 — Use selected board size Given the player has selected a board size When the player starts a new game Then the game uses the selected board size	toDo
2. Choose the board type	2.1	AC 2.1 — View available board types Given the player is on the game setup screen When the player views the board type selection	toDo

		Then the available board types are displayed	
	2.2	AC 2.2 — Select a board type Given the available board types are displayed When the player selects a board type Then the selected board type is indicated as selected	toDo
	2.3	AC 2.3 — Use selected board type Given the player has selected a board type When the player starts a new game Then the game uses the selected board type	toDo
3. Start a new game of the chosen board size and type	3.1	AC 3.1 — Start a new game Given the player has chosen a board size and board type When the player selects the option to start a new game Then a new game is created using the chosen board size and board type	toDo
	3.2	AC 3.2 — Display the game board Given the player has started a new game When the game is created Then the game board is displayed according to the selected board size and type	toDo
4. As a player, I want to make a move in a game so that I can play Solitaire.	4.1	AC 4.1 — Make a valid move Given a game is in progress and the player selects a valid move When the player makes the move Then the game board is updated to reflect the move	toDo
	4.2	AC 4.2 — Prevent an invalid move Given a game is in progress and the player selects an invalid move When the player attempts to make the move Then the game board remains unchanged	toDo
5. As a player, I want the game to determine when it is over so that I know when I have completed or lost the game.	5.1	AC 5.1 — Determine when the game is won Given a game is in progress When the player completes all required moves to win the game Then the game indicates that the game is over and the player has won	toDo
	5.2	AC 5.2 — Determine when the game is lost Given a game is in progress When the player has no valid moves remaining Then the game indicates that the game is over and the player has lost	toDo

Here is my AI log: <https://chatgpt.com/share/6ac5b0d1-dbd4-83e8-bf7d-dc9dca3482ec>

I did not have any major issues with the output I got
